

Nature around the house

We provide information concerning the design of your property.

There are many options available to you when designing your property. This means that it is often not easy to make the right decision.

If you would like to design your property ecologically, we offer you information on wild perennials, flower meadows, fruit and deciduous trees, hedges, as well as a wide range of options to create habitats for animals (hedgehogs, birds, insects, etc.).

On our homepage we offer you useful information and videos on all these topics.

SIAS: a syndicate for sustainability

The Biological Station of the SIAS municipal syndicate coordinates and realises local and regional nature conservation projects in its 21 municipalities with the support of the Ministry of the Environment.

The task of the Biological Station is to ensure the realisation of national nature conservation goals (e.g. preservation of biodiversity) at local and regional level, such as implementing practical nature conservation projects, protecting species and biotopes, as well as providing advice and raising awareness.

You can find more informations on our homepage:
